1   ModPerl::Const -- ModPerl Constants

1.1 Synopsis

```
# make the constants available but don't import them
use ModPerl::Const -compile => qw(constant names ...);

# w/o the => syntax sugar
use ModPerl::Const ("-compile", qw(constant names ...));

# compile and import the constants
use ModPerl::Const qw(constant names ...);
```

1.2 Description

This package contains constants specific to mod_perl features.

Refer to the Apache2::Const description section for more information.

1.3 Constants

1.3.1 Other Constants
